

Dust Control Chemicals

Minimize dust & reduce health & safety hazards

Dust control treatment programs are designed to address many different types of dusting problems. In many handling operations, dust particles are created and released at transfer points or other downstream process areas.

Veolia's **DusTreat*** dust control programs offer a variety of binding, wetting, foaming, and crusting agents that address fugitive dust and stabilize material stockpiles, landfills or tailings surfaces, reducing customer's overall operating and maintenance costs.

- Minimize hot spots & spontaneous combustion
- Reduce dusting by up to 90% during loading, unloading, stack-out & reclamation
- Address operator safety & environmental compliance
- Reduce water needed for dust suppression on mine roads
- Decrease fuel consumption by operating water trucks less frequently
